One of the most important areas of men's health is the prostate. Testosterone levels play a big role in this. This level declines with age, about 1% per year after age 30. A high level of xenoestrogens (from plastics, chemicals, fluoride, etc) causes the male reproductive system to weaken and endangers prostate health.

Suggestions for keeping the prostate healthy:

- **Equolibrum** is an exclusive DiHydrotestosterone (DHT) binding product that supports healthy prostate function and urinary flow without side effects.
- **Saw Palmetto** helpful in relieving bladder problems from an enlarged prostate. It inhibits DiHydrotestosterone (DHT) which causes the prostate to grow.
- **Flax Seed Oil** and **Super Omega 3** (EPA and DHA) are essential fatty acids that increase fertility, contribute to less frequent urinations, increase energy and enhance sexual vigor.
- **Men's X-Action Reloaded** (a natural Viagra) enhances male energy and supports the male reproductive organs and functions by increasing circulation.
- **Men's Formula with Lycopene** is an excellent combination for overall men's health. Lycopene seems to help prevent prostate cancer.
- **PSII** is an herbal formula to benefit the prostate and reduce inflammation.
- **DHEA-M** is a hormone designed to support the production of testosterone in the body and aid common male reproductive problems such as erectile dysfunction or benign prostatic hyperplasia (BPH).
- **Maca** strengthens sexual desire and performance; as well as increasing general energy.

Good snacks for men: pumpkin seeds, pistachio nuts
